

PA AAP MEMBER SURVEY

We distributed the Pediatric Trauma-Informed Care Member Survey before (Oct 2023) and after (Apr 2024) forum and round table events to AAP members and attendees to inform future directions of webinars, roundtables, and other educational content. These are highlights of the results from the surveys.

- 1. Expand Educational Offerings:** Develop and implement targeted webinars, roundtables, or townhalls and workshops tailored to both the clinical and administrative aspects of integrating trauma-informed practices into everyday patient care
- 2. Enhance Collaboration:** Foster partnerships with academic institutions and other organizations to provide comprehensive training programs on trauma-informed care
- 3. Resource Utilization:** Increase awareness and utilization of existing AAP and non-AAP trauma-informed care resources among members through targeted outreach campaigns and resource sharing platforms as many respondents reported they had not reviewed the AAP trauma-informed care resources.
- 4. Evaluate Impact:** Continuously assess the impact of educational initiatives through follow-up surveys and qualitative feedback sessions to gauge knowledge retention and practice integration among members.
